

1-to-1 archive report

This PDF is a one-to-one readable report of the uploaded archive. It includes archive metadata, full ZIP inventory, full printable text contents, full .c file contents, and PBO internal inventories/extracted text when PBOs were present and readable.

Important: line numbers are added by this report for reference. The SHA-256 hashes identify the original bytes. Binary files are not printed as raw binary inside the PDF; they are documented with size, CRC/metadata, and SHA-256. PBO script/text files are extracted and printed when readable.

Source archive
