000150 |     * Default values for dynamic fog
000151 |     *
000152 |     * Chernarus: Height bias 50..200, distance density 0.01..0.05, height density 0.9..1
000153 |     * Enoch: Height bias 155..170, distance density 0.01..0.05, height density 0.9..1
000154 |     * Sakhal: Height bias 0, distance density 0.001..0.35, height density 1
000155 |     *
000156 |     * Observations:
000157 |     *
000158 |     * If distance density is 0 and height density is 1, there is no meaningful fog regardless of height bias.
000159 |     * If both distance and height density are 1, height bias has no effect.
000160 |     * If height density is 1, height bias has little to no effect and fog density is controlled by distance density.
000161 |     * If height density is 0, height bias has full effect.
000162 |     *
000163 |     * View distances for distance/height density = 0 (VERY rough visually determined estimates):

```

```

000164 | *
000165 | * Height bias = current altitude - 20 m: No discernible fog
000166 | * Height bias = current altitude - 10 m: Faint fog on horizon
000167 | * Height bias = current altitude: Slightly less faint fog on horizon
000168 | * Height bias = current altitude + 10 m: Fog more clearly discernible but doesn't limit view distance yet
000169 | * Height bias = current altitude + 20 m: ~1000 m
000170 | * Height bias = current altitude + 30 m: ~900 m
000171 | * Height bias = current altitude + 40 m: ~300 m
000172 | * Height bias = current altitude + 50 m: ~100 m
000173 | * Height bias = current altitude + 60 m: ~50 m
000174 | * Height bias = current altitude + 70 m: ~20 m
000175 | * Height bias = current altitude + 80 m: ~7.5 m
000176 | * Height bias = current altitude + 90 m: ~3 m
000177 | * Height bias = current altitude + 100 m: ~1 m
000178 | * Height bias = current altitude + 110 m: ~0 m
000179 | *
000180 | * View distances for distance density = 1 and height density = 0 (VERY rough visually determined estimates):
000181 | *
000182 | * Height bias = current altitude - 80 m: No discernible fog
000183 | * Height bias = current altitude - 70 m: Faint fog on horizon
000184 | * Height bias = current altitude - 60 m: Slightly less faint fog on horizon
000185 | * Height bias = current altitude - 50 m: Fog more clearly discernible but doesn't limit view distance yet
000186 | * Height bias = current altitude - 40 m: ~1000 m
000187 | * Height bias = current altitude - 30 m: ~900 m
000188 | * Height bias = current altitude - 20 m: ~300 m
000189 | * Height bias = current altitude - 10 m: ~100 m
000190 | * Height bias = current altitude: ~40 m
000191 | * Height bias = current altitude + 10 m: ~20 m
000192 | * Height bias = current altitude + 20 m: ~7 m
000193 | * Height bias = current altitude + 30 m: ~2.5 m
000194 | * Height bias = current altitude + 40 m: ~0 m
000195 | *
000196 | * The following values result in roughly same effective view distance:
000197 | *
000198 | * Height bias = current altitude with dist density 1 and height density 0
000199 | * Height bias = current altitude + 15 with dist density 0.5 and height density 0.5
